

Minimizing variability in microbiome workflows to enhance reproducibility and performance

June 27, 2023 at 11:00 a.m. ET

Description

Join this webinar for key insights into the importance of standardized microbiome workflows to enhance your study's overall performance and success.

Learning objectives

- To discuss how standardized sample collection paves the path for future microbiome applications, such as discovery, diagnostics and/or therapeutics
- To gain an appreciation for how fecal self-collection anytime, anywhere can support diversity, equity and inclusion in clinical trials and microbiome research
- To understand the impact of FDA authorization of a fecal self-collection device to ensure quality and high standards for diverse microbiome applications

Speakers

Heloise Breton
Product manager,
Microbiome & Metabolomics

Tara Crawford Parks
Senior manager,
R&D

Steven Medina
Director, Microbiome Collection Core,
Harvard TH Chan School of Public Health,
Department of Biostatistics
